

AQUAPOLIS

STRUCTURAL CONFLICTS AND THEIR MANAGEMENT

In this training, in which two separate simulations are used, you will first be a treasure hunter in the sunken city of Aquapolis.

Later, an exciting application in which your resources are scarce at certain times will be waiting for you. Now you are above water and earning your living from fishing. If you do not pay attention to the hunting seasons, your fish stocks will be depleted. However, you are not the only hunter. How will you manage the conflicts that will naturally emerge under these conditions?

While becoming skilled in managing structural conflicts, you will also learn to manage change effectively.
